## Das Kopernikus-Projekt ENavi

Financing models for energy efficiency in public infrastructure: Experiences from Germany and neighbouring countries

Aleksandra Novikova | IKEM & University of Greifswald Kateryna Stelmakh, Irina Stamo, Julie Emmrich | IKEM Matthias Hessling | European Lighting Expert Association (ELEA)

# Why focus on financing municipal projects?

GEEÖRDERT VON

- *aims to* strengthen Europe's competitiveness and to stimulate investment
- *explicitly mentions the role subnational authorities*
- In EU, regional and local authorities manage the majority of public investment
  - In 2013, they carried out 55% of public investment
- The government expenditure in 2013 was
  - EU: 46.3 % of GDP or EUR 6.9 trillion
  - Germany: 44.2% of GDP or EUR 1.4 trillion

### **Municipal investment in Germany**

#### 3

#### Aims and tasks

Aim

- Assist municipalities on financing energy efficiency and low carbon upgrades of
  - Street lighting
  - Public buildings

#### Tasks

• Extensive overview and analysis of financing models used to finance the upgrade of the public infrastructure.

### Methodology

#### Interviews via Phone and E-Mail

• Ministries, utilities, municipalities, cities, EU funds, other IFIs, etc.

#### Model overview structure

- Key actors and their roles
- Projects that could be financed
- Advantages and disadvantages

#### **Online Survey**

• Sent to 34 associations of municipalities and 300 other stakeholders.

#### **Furthermore**

- Literature review
- Screening project websites
- Screening database

#### Conducting individual case studies

- Model context
- Projects scope
- Involved stakeholders
- Implementation experience
- Outcomes

### **Review of identified models**

Bundesministerium für Bildung und Forschung

GEFÖRDERT VOM

Self-financing	Debt-financing	Financing by a private contractor	Financing through energy savings (EPC)
<ul> <li>Budget allocation</li> <li>Internal contracting</li> <li>External revolving fund</li> </ul>	<ul> <li>Concessional loans</li> <li>Commercial loans</li> <li>Bonds</li> <li>Institutional investors</li> </ul>	<ul> <li>Simple contracting model</li> <li>Contracting with forfeiting and waiver of defense</li> </ul>	<ul> <li>Guaranteed savings model</li> <li>Shared savings model</li> <li>Other energy performance contacting</li> </ul>
Leasing or concession		Financing by utilities	
to a private partner	Project finance		
<ul> <li>Leasing</li> </ul>		Energy Efficiency	Financing by citizens
<ul> <li>Concession to a private partner</li> <li>Special purpos vehicle (SPV)</li> </ul>	<ul> <li>Special purpose</li> </ul>	Obligation Schemes	
	vehicle (SPV)	On-bill financing	Crowdfunding

#### **Revolving funds**

KOPERNIKUS ENavi >>>> PROJEKTE Die Zukunft unserer Energie

Bundesministerium für Bildung und Forschung

Architecture	Advantages
<ul> <li>Internal organisational units act as contracting partners</li> <li>Municipal establishes a fund or trust from own funds</li> <li>Fund/ trust finances projects without interest rate or additional costs</li> </ul>	<ul> <li>Municipalities:</li> <li>can reuse capital</li> <li>do not need external capital</li> <li>cooperate within their units</li> <li>pay no interests on capital</li> </ul>
Other features	Disadvantages
<ul> <li>Projects financed by this model:</li> <li>Municipal infrastructure projects, e.g. buildings or street lightning</li> <li>Jurisdictions that applied this model:</li> <li>Conceptualized in Germany, now started throughout EU (France, Italy, Croatia)</li> </ul>	<ul> <li>Municipalities:</li> <li>carry fully up-front cost</li> <li>bear all project risks</li> <li>may face lower project efficiency vs when the upgrade is delivered by private actors</li> </ul>
	Das Kopernikus-Projekt ENavi

### Udine, Italy (2014-...)

GEFÖRDERT VOM

- Initial funding of 32 kEUR by the city
- Energy savings from funded projects are also redirected to the fund

### **External fund with multiple financiers**

Architecture	Advantages
<ul> <li>Revolving fund uses external funding sources and lends to municipality units</li> <li>Becoming self-sustaining, finance running costs by services fees &amp; interest rates</li> </ul>	<ul> <li>Municipalities:</li> <li>Have a wide range of financial resources by being open to private investors</li> <li>Allow private investors to be part of urban development projects</li> </ul>
Other features	Disadvantages
<ul> <li>Projects financed by this model:</li> <li>Scale and type depends on available funds and priorities</li> <li>Jurisdictions that applied this model:</li> <li>National level funds: BGR and HRV</li> <li>Municipal level: The Hague, NLD</li> </ul>	<ul> <li>Municipalities are confronted with:</li> <li>Higher complexity in the initial setup and high cooperation between stakeholders</li> <li>Political concerns, given private entity management of public and private funds</li> </ul>

#### **Debt-financing**

Bundesministerium für Bildung und Forschung

GEFÖRDERT VOM

#### Bonds

Bundesministerium für Bildung und Forschung

Architecture	Advantages
<ul> <li>Municipal bonds are issued by the local government or their agencies</li> <li>Bonds can be certified as green bonds by an independent institution</li> </ul>	<ul> <li>Municipalities:</li> <li>Can issue bonds autonomously or in cooperation with bond agency</li> <li>Get low interest rates compared to commercial bonds or loans</li> </ul>
Other features	Disadvantages
<ul> <li>Projects that can be financed by this model:</li> <li>Any project, if the municipal has access to a bond agency</li> <li>Jurisdictions that applied this model:</li> <li>Gothenburg (SWE) &amp; Varna (BGR)</li> <li>Not common in Europe</li> </ul>	<ul> <li>Municipalities:</li> <li>Need to prepare extensively and costly</li> <li>Need a good credit rating, if acting autonomously</li> </ul>

**Issuing bonds** 

### Gothenburg's Green Bonds (2013-...)

für Bildung

und Forschung

Bundesministerium

KOPERNIKUS

Die Zukunft unserer Energie

KTE

ENavi

Project overview	Project scope
<ul> <li>Gothenburg implemented its Green Bond Program in 2013</li> <li>Raises capital for climate change and environmental projects</li> </ul>	<ul> <li>Eligible projects include: mitigation, adaptation/ resilience and environment</li> <li>Projects are selected by the city office and approved by the city executive board</li> </ul>
Financing structure	Implementation & outcome
<ul> <li>Bonds are issued on the capital market, any mainstream investor can buy them</li> <li>1<sup>st</sup> bond issued accounted for 56 mEUR</li> </ul>	<ul> <li>Gothenburg was the first city to issue green bonds</li> </ul>
• Total capital raised 0.46 bEUR in 2016	• Since 2013, 11projects have been funded

**Public-private partnerships** 

**GEFÖRDERT VOM** 

## Energy performance contracting (EPC), leasing, concession, project finance, etc.

### Leasing

KOPERNIKUS

GEFÖRDERT VOM

Architecture	Advantages
Leases out the upgraded street lighting         Municipality       Private actor         Owns       Sells the outdated lighting infrastructure       Plans, finances, and implements the upgrade after purchase         Street lighting       Street lighting       Plans, finances, and implements the upgrade after purchase	<ul> <li>Municipalities:</li> <li>Spread financial risks and costs over time</li> <li>Outsource technical risks to the private sector</li> <li>No debt increase but new infrastructure</li> </ul>
Other features	Disadvantages
<ul> <li>Projects that can be financed by this model:</li> <li>Suited for projects with high initial investment and high budget restrictions</li> <li>Jurisdictions that applied this model:</li> <li>Not very common in EU, applied in Italy</li> </ul>	<ul> <li>Municipalities:</li> <li>Suffer higher costs in the long-term compared to self-financing</li> <li>Have no direct control over the assets</li> </ul>

### Cesena (2015-2027)

GEFÖRDERT VOM

Project overview	Project scope
<ul> <li>Its objective is to decrease energy consumption by 30-40%</li> <li>All existing and new street lights shall be upgraded to LED</li> </ul>	<ul> <li>Out of the 21 k luminaries ownership of 15.8 k was transferred to the contracting partner in 2010, renewed in 2015</li> <li>The contractor is responsible for maintenance, control and management of the network and upgrading it</li> </ul>
Financing structure	Implementation & outcome
<ul> <li>The municipal pays a leasing fee to the contractor, which in turn upgrades the street-lighting infrastructure</li> <li>At expiry ownership is transferred back</li> </ul>	<ul> <li>The municipal has created an investment plan together with the contractor</li> <li>In 2010-2017, 2.3m EUR were spent to upgrade the oldest 4.9k luminaries</li> </ul>

Source: Burioli (2017) in Novikova et al. (2018).

### **Project finance**

für Bildung

GEFÖRDERT VOM

Leverage capital from the private sector

KOPERNIKUS

Die Zukunft unserer Energie

- Can carry out projects off balance-sheet
- Can contract for financial penalties, if targets are not achieved

- Suffer high transaction costs when implementing the SPV
- May suffer administrative costs

The results are still to see

GEEÖRDERT VON

Bundesministerium

#### **Financing by utilities**

GEFÖRDERT VOM

#### **On-bill financing**

KOPERNIKUS ENavi PROJEKTE Die Zukunft unserer Energie

Bundesministerium für Bildung und Forschung

Architecture	Advantages	
• The utility provides a loan to the municipality, which pays it back through its energy bill - based on energy savings	<ul><li>Municipalities:</li><li>Can easily set up and implement an on- bill repayment model</li></ul>	
• The municipality can oversee and require specific technology use for upgrades	• Repay their loan via their energy bill, not suffering additional administrative costs	
Other features	Disadvantages	
<ul> <li>Projects that can be financed by this model:</li> <li>In principle easy to implement and set up for small to medium investments</li> <li>Jurisdictions that applied this model:</li> <li>Not common in the EU</li> </ul>	<ul> <li>Municipalities:</li> <li>Need to repay their loan long-term, having it on their own balance-sheet</li> </ul>

und Forschung

Bundesministerium

## California, USA (2004-ongoing)

Project overview	Project scope
<ul> <li>The utility Pacific Gas and Electric (PG&amp;E) provides zero interest rate loans to municipalities in northern California</li> <li>Southern California Edison (SCE) has a similar scheme for southern California</li> </ul>	<ul> <li>PG&amp;E and SCE each provides loans between 5-250 kUSD to public institutions</li> <li>To qualify for a loan, estimated savings have to be enough to repay it</li> </ul>
Financing structure	Implementation & outcome
<ul> <li>Loans are payed back monthly via the energy bill</li> <li>Loans are refinanced by estimated energy savings by the efficiency measures</li> </ul>	<ul> <li>As of 2016, several hundred projects have been realized</li> <li>More than 180 k luminaries were upgraded by on-bill financing of PG&amp;E</li> </ul>
